

OCS DUMPSTER ENCLOSURE SPECIFICATIONS

Single Can Pad: OCS recommends a 12 foot wide by 10 foot deep pad for a single can dumpster pad. The pad should be six inches thick concrete or four inches thick with wire reinforcements.

Double Can Pad: A double can pad should be 20 feet wide if no center gate post is installed or 24 feet wide if a center gate post is installed.

Gate Requirements:

If you choose to fence or gate your dumpster pad, please follow these guidelines to prevent future damage. A single can pad requires a minimum gate opening of ten feet to allow access for the truck. A double can pad with no center post requires a minimum opening of 18 feet. A double can pad with a center post requires a 10 foot opening on each side minimum. The gate needs to be able to open to a minimum of 125 degrees. All gates (both halves of double gate) need to have a cane bolt installed that is long enough to reach the ground in the open position. The pavement must be drilled to accept the cane bolt so the gates will remain open on a windy day.

The above are minimum requirements for safe operation. Our driver will dump cans in undersized enclosure, if possible. However, OCS will not be held responsible for any damage incurred or damage incurred to gates caused by normal opening and closing.
